

**Roller systems:**

**BigVertico:**

Unique roller blind systems for extreme sizes and applications.

Multiple different system types possible; only 1 fabric with the tube rolling down from top to bottom, as well as 2 fabrics with the tube running half-way. It is also possible to have multiple different fabric types to create an effect or provide more sun protection at the top of the system and more visibility (see through) at the bottom of the system. Also corner solutions are possible which makes it ideal for sliding doors etc.

Technically only 1 track at the side is possible, we do however recommend from esthetical point of view and stability to use a track on both sides.

**Maximum width:** 30000 mm (*wider even possible on request*)  
**Maximum height:** 8000 mm
